Connecting Audio

Connecting to audio and WebCam and changing audio connections.
When you first join a meeting you will see the audio connection screen on the right. You can change any of these settings by clicking on the down arrow next to the associated device. Using “Call Using Computer” is recommended for the best quality. If you cannot use the computer you should choose the option to “Call Me” from the drop down list. If the settings are correct click on Connect Audio to be connected to the meeting.
If you need to change your connection settings during the class click on the icon with the 3 dots.

Select “Switch Audio” from the pop up menu.
You can now change the audio connection and use the call me feature if necessary. Using “I will Call In” should be avoided since you will be identified in the meeting as a “Call in user” and not be listed by your name.
